

Validation of an Email ID.

DESCRIPTION

As a developer, write a program to search a string entered by a user from the array of strings.

Background of the problem statement:

You have an array of email IDs of employees. As a programmer, write a program to search the email ID entered by a user.

You must use the following:

- Eclipse/IntelliJ: An IDE to code the application
- Java: A programming language
- Git: To connect and push files from the local system to GitHub
- GitHub: To store the application code and track its versions
- Core Java concepts: Methods, collections, and strings

Following requirements should be met:

- The versions of the code should be tracked on GitHub repositories
- The code should be able to search the required string from the array of strings

Note: Here I used Regular Expression to Validate the E-mail.
